

## 17 $\alpha$ -Hydroxypregnenolone

<http://cn.lumiprobe.com/p/17-alpha-hydroxypregnenolone-387-79-1>

In clinical diagnostics, measuring the blood level of 17 $\alpha$ -hydroxypregnenolone serves as an important marker for diagnosing two distinct forms of congenital adrenal hyperplasia (CAH): 3 $\beta$ -hydroxysteroid dehydrogenase deficiency, where its level is significantly elevated, and 17 $\alpha$ -hydroxylase deficiency, where its level is reduced. It is also used in the comprehensive assessment of adrenal cortex function.

By ordering our high-purity 17 $\alpha$ -hydroxypregnenolone, you ensure product purity and result reproducibility, which is critical for both routine diagnostics and scientific research.
