

(S,R,S)-AHPC-PEG2-C2-azide

<http://cn.lumiprobe.com/p/ahpc-peg2-c2-azide>

Proteolysis targeting chimeras (PROTACs) are cell-permeable heterobifunctional molecules that can remove specific proteins from the cell. One end of such molecule contains a ligand to bind to the target, and the second end recruits the E3 ligase complex. Close proximity results in substrate polyubiquitination and subsequent protein degradation by cellular proteasome.

(S,R,S)-AHPC-C2-azide is a protein degrader building block for the synthesis of molecules for targeted protein degradation and PROTAC technologies. This conjugate contains a von Hippel-Lindau (VHL)-recruiting ligand and a PEG2-C2 crosslinker with an azide function group, which can be conjugated to alkyne-functionalized linkers and target protein ligands through click chemistry reactions.
