

## Alkyne dT phosphoramidite

<http://cn.lumiprobe.com/p/alkyne-amidite-dt>

**This product will be discontinued soon in favor of [Alkyne dT phosphoramidite](#). We may still have some material in stock (please see availability above).**

Alkyne dT phosphoramidite is used for the synthesis of oligonucleotides containing an internal alkyne modification attached to the uridine 5-position. The alkyne group can be subsequently modified by various azides using copper-catalyzed Click chemistry.
