

ALS-1 Surfactant

<http://cn.lumiprobe.com/p/als-1-surfactant>

ALS-1 (Acid-Labile Surfactant-1) is an anionic surfactant compatible with mass spectrometry (MS) and used to solubilize and unfold proteins in proteomic applications. ALS-1 significantly reduces the time of proteolytic digestion of proteins, facilitates the cleavage of proteins resistant to proteolysis, and enhances the solubility of hydrophobic peptides and proteins.
