Biotin-11-dUTP

http://cn.lumiprobe.com/p/biotin-11-dutp

Biotinylated deoxyuridine triphosphate (dUTP) can be used for DNA labeling using various methods, including Nicktranslation and 3'-terminal non-radioactive labeling. Generated probes can be used in various hybridization experiments such as Southern blot, Northern blot, dot blot, or FISH. Biotin-labeled probes are detected with horseradish peroxidaseconjugated streptavidin or other biomolecule conjugates binding biotin.

«11» in the compound name indicates the length of the linker between dUTP and biotin; this linker increases the efficiency of labeled dUTP incorporation into DNA and interaction of biotin with specific proteins such as avidin/streptavidin or antibiotin antibodies.
