DiR, lipophilic tracer

http://cn.lumiprobe.com/p/di-r-lipophilic-tracer

DIR is a near-infrared fluorescent carbocyanine dye for cell membrane labeling *in vivo* and *in vitro*. DIR diffuses laterally to stain the entire cell, allowing it to be used as an anterograde and retrograde tracer of neurons. In intact tissue, the dye does not transfer from labeled to unlabeled cells, but some transfer may occur when the membrane is disrupted, for example, after sectioning. The dye is weakly fluorescent until incorporated into membranes.

DiR can be used with other tracers in multi-color studies, such as <u>Dil</u> or <u>DiO</u> and for NIR imaging.
