

Ethylenedimorpholine

<http://cn.lumiprobe.com/p/ethylenedimorpholine-1723-94-0>

The heterocyclic compound 4,4'-ethylenedimorpholine also known as 1,2-dimorpholinoethane (DME) contains morpholine rings. It is the ligand used to prepare complexes of transition metals, e.g. Mn(II), Fe(II), Co(II), Ni(II), Cu(II), Zn(II). Ligand and the related complexes have been mentioned among intermediates for the coordinate compounds with the transition metal centers for coatings, and as active substances in antibacterial activity investigations.
