Hydroxy-PEG3-thiol

http://cn.lumiprobe.com/p/hydroxy-peg3-thiol-56282-36-1

A bifunctional PEG3-based linker with thiol (SH-) and hydroxyl (OH-) functional groups. Thiols are nucleophilic and participate in many reactions with electrophiles.

Thiols rapidly react with gold surfaces and nanoparticles, forming self-assembled monolayers (SAMs). Thiol reagent can be used to cover gold with a hydrophilic monolayer.

外观:

分子 166.24

CAS 56282-36-1

编号:

分子 C₆H₁₄O₃S 式:

IUPAC 2-[2-(2-mercaptoethoxy)ethoxy]ethanol

溶解
