

(C0) L-Carnitine-d9

<http://cn.lumiprobe.com/p/l-carnitine-trimethyl-d9>

Carnitine plays an important role in metabolism in mammals, plants and some bacteria. L-carnitine is involved in fatty acid metabolism, transporting fatty acid chains into the mitochondrial matrix, allowing cells to obtain energy. When using deuterated L-carnitine-d9 as a standard for LC MS/MS, it is possible to determine the content of free carnitine in most biological fluids.

Carnitine and its derivatives are a diagnostic sign of disorders of β -oxidation of fatty acids. Isotopically labeled L-Carnitine-d9 is used to determine free carnitine in disease screening, for example: systemic carnitine deficiency, carnitine palmitoyl transferase deficiency.

外观: 白色固体

分子量: 206.72

编号:

CAS 126827-79-0, 2687961-04-0 (chloride)

分子式:

$C_7H_7D_9ClNO_3$

溶解度:

DMF、DMSO、乙醇

质量控制:

NMR 1H 和 HPLC-MS (95+%, D: 98+%)

储存条件:

收到后在 $-20^\circ C$ 黑暗条件下可保存 24 个月。运输: 室温下最多可保存 3 周。干燥。

法律声明:
