

ProbeMaster® Lyo ROX, 5×

<http://cn.lumiprobe.com/p/probemaster-mix-rox-lyo>

ProbeMaster® Lyo ROX is a lyophilized reaction mixture containing all the necessary components for quantitative PCR using intercalating dyes or hydrolyzable probes. Its composition is optimized to achieve ideal results with a low threshold cycle and a high signal-to-background ratio. The ready-to-use reaction mixtures reduce the risk of sample contamination. To reconstitute the mixture into a liquid form, add the specified amount of water.

The ProbeMaster® Lyo ROX reaction mixture allows you to solve a large number of tasks with minimal time costs. Due to the presence of the [ROX](#) reference dye, the mixture is suitable for accurately determining the DNA template content in the sample. It can be used for quantitative analysis, gene expression determination, genotyping, SNP detection, and other applications.

Reaction mixture composition

- HS Taq DNA polymerase;
- Deoxynucleoside triphosphate mixture;
- PCR buffer (contains Mg²⁺);
- ROX reference dye;
- Cryoprotectants

Key characteristics

- One tube of lyophilized mixture, after dilution in 450 µL of water, is sufficient for 100 reactions of 25 µL each.
- The mixture is completely ready for use. To set up the reaction, you only need to add the intercalating dye or probe for detection of the amplification product, the DNA sample, primers, and water.
- The mixture is suitable for PCR of fragments up to 3000 bp, with no more than 70% GC content, and does not require high-precision amplification. Genomic, viral, plasmid DNA, etc., can be used as a template.
- The reaction mixture contains Taq polymerase with "Hot-Start" technology. The HS Taq DNA polymerase used is a complex of monoclonal antibodies with the enzyme. Heating the sample during the first PCR cycle inactivates antibodies in the complex and activates the enzyme. The "Hot-Start" technology prevents nonspecific amplification and primer dimers.
- The HS Taq DNA polymerase included in the mixture possesses 5'-3' polymerase, 5'-3' exonuclease, and adenylyltransferase activity.
- For fluorescence detection, use a DNA probe labeled with a fluorophore and a quencher (hydrolyzable probes, "molecular beacons", "scorpion" type primers), or two probes labeled with fluorophores forming a FRET pair.
- The [ROX](#) reference dye included in the mixture allows normalization of probe and intercalating dye fluorescence intensities, such as [dsGreen](#). The ROX concentration has explicitly been optimized for use with most real-time PCR machines on the market.
- Does not contain UDG and dUTP.
- The mixture is suitable for applications where uracil-containing amplification products cannot be used.

Equipment compatibility:

The ProbeMaster® Lyo ROX reaction mixture is compatible with most real-time PCR machines, including those manufactured

by Applied Biosystems (7300, 7500, 7500 Fast, 7900HT, QuantStudio 12k Flex, QuantStudio 3, QuantStudio 5, QuantStudio 6 Flex, QuantStudio 7, StepOne, StepOnePlus, ViiA 7 System), Bio-Rad (CFX384, CFX 96, iQ5), Roche (LC 480), Stratagene (MX3000P, MX3005P, MX4000), etc.

PCR reaction mixture selection table

Name	Reaction mixtures for quantitative PCR (RT-PCR)				Application
	dsGreen	Eva488	ROX	UDG, dUTP	
ProbeMaster® Lyo UDG Cat.# •0514	—	—	—	✓	qPCR with DNA probes or intercalating dye
ProbeMaster® Lyo ROX Cat.# •0114	—	—	✓	—	
ProbeMaster® Lyo Eva488 Cat.# •0614	—	✓	—	—	
ProbeMaster® Lyo Eva488 ROXCat.# •0714	—	✓	✓	—	
ProbeMaster® Lyo dsGreen Cat.# •0814	✓	—	—	—	
Reaction mixture for standard PCR					
ProbeMaster® Lyo GEL Cat.# •0024	—	—	—	—	PCR followed by gel electrophoresis analysis, contains dye for application to gel
ProbeMaster® Lyo GEL UDGCat.# •0524	—	—	—	✓	
Universal reaction mixture					
ProbeMaster® Lyo UNI Cat.# •0534	—	—	—	—	qPCR with DNA probes/intercalating dye or standard PCR followed by gel electrophoresis analysis

质量控制 功能测试

储存: 4°C 下 12 个月 (自交付之日起)。

运输: 在 25°C 温度下最多 21 天。

重新配制为液体形式后, 可在 4°C 下储存最多 30 天, 或在有效期内冷冻并储存在 -20°C 下。重构的混合物最多可经历五次冻融循环。
