

Ac4ManNAI (N-(4-pentynoyl)-mannosamine-tetraacylated)

<http://cn.lumiprobe.com/p/tetraacetyl-n-4-pentynoyl-mannosamine-ac4mannal>

The tetraacetylated N-(4-pentynoyl)-mannosamine (Ac4ManNAI) is an alkyne-labeled monosaccharide that provides a highly specific tool for studying glycoproteins through metabolic labeling *in vivo* and subsequent chemoselective ligation.

Ac4ManNAI is cell-permeable unnatural sugar that is intracellularly processed and incorporated instead of its natural monosaccharide counterpart N-acetylmannosamine (ManNAc).

The resulting alkyne-contained glycoprotein can be detected via [Cu\(I\)-catalyzed \(CuAAC\)](#) click reaction with either fluorescent-labeled [azides](#) or [biotin-azide](#).
